

SAMPLE

- **Description:** The owl is a large bird with big eyes. They have sharp claws called talons on each foot. Some owls look like they have ears, like this one, but they are really just feathers tuffs.
- **Where does your animal live?** The Great Horned Owl lives in the deep forest. They like to live in other bird's nests so they don't have to build their own. They live in the hollow area of dead trees too. Owls live all over the United States.
- **What does your animal eat?** Owls eat rodents, like mice. They also eat lizards, frogs and fish.
- **Name 2 adaptations of your animal:** Owls have large eyes to see their prey at night. They have sharp talons to catch their food.
- **1 interesting fact about your animal:** Crows give owls a hard time. They will bother them with loud noises until they move to another area. The Great Horned Owl is the only animal that regularly eats skunks!
